ORGANIZATION AND ADMINISTRATION OF ASCS PROGRAMS

Agricultural Stabilization and Conservation Service Programs are administered by State and county committees. The State committee is composed of five farmer members appointed by the Secretary of Agriculture. The Director of the Cooperative Extension Service serves as ex-officio member of the State committee. The State committee is responsible for the administration of the assigned programs in the State. The day-to-day operation of the State office is delegated to the State Executive Director by the State committee.

The county committee in the 159 counties in Georgia is composed of three farmers elected annually. The county committee is assisted by community committees who are also elected annually. The community committee is composed of three members and represents an area of the county usually consisting of one or more militia districts.

The day-to-day operation of the county office is assigned to a manager employed by the county committee.

The programs administered by the State and county committees in Georgia are the Agricultural Conservation, Allotment and Marketing Quotas on Tobacco, Peanuts, Cotton and Wheat, Price Support, Feed Grain, Wheat Stabilization and Conservation Reserve Programs. From time to time additional programs are assigned by the Congress or the Secretary of Agriculture. Many times this additional assignment of programs results from disaster conditions, droughts and other temporary situations.

PERMANENT VEGETATIVE COVER

ACP cost-sharing assistance is available to help farmers establish or improve permanent grasses and legumes. In 1961, Georgia farmers established 122,946 acres of permanent grasses and legumes and improved 34,598 acres of existing cover. Cost-shares amounting to \$2,700,740 were earned for the performance of these practices.

A GOOD WATER DISPOSAL SYSTEM

Water disposal systems such as the one pictured above contribute to better land utilization. In 1961, Georgia farmers earned \$55,215 in ACP cost-sharing by establishing 33,134,000 square feet of permanent sod waterways.

AGRICULTURAL CONSERVATION PROGRAM - 1961

The purpose of the Agricultural Conservation Program is to help achieve additional conservation on land now in agricultural production rather than to bring more land into agricultural production. Through this program the Federal Government shares with the farmers the cost of carrying out approved soil and water conservation practices which farmers would not carry out to the needed extent without financial assistance.

Under the leadership of the county ASC committees a county program was developed, within the framework of the State and National program, to help meet the soil and water conservation problems in the individual county. The county program was confined to conservation practices on which the Federal cost-sharing was most needed to achieve the maximum conservation benefit in the county. Representatives of other local agricultural agencies and others interested in conservation participated in the development of the county program.

The program is active in all 159 counties. Cost-sharing to establish or improve conservation practices was offered to all farmers. Cost-sharing must be requested by the farmer prior to starting the practice. The extent approved was necessarily based on conservation needs of the farm with emphasis on the urgency of the conservation problem to be treated and the availability of funds for such use. The Government's share of cost for the approved practices represents about fifty percent of the total cost.

Georgia's share of the National ACP program funds is approximately $7\frac{1}{2}$ million dollars. These funds were allocated to the counties on basis of conservation needs. The entire amount was utilized. A detailed analysis of the use of these funds is contained in the statistical section of this report.

CONSERVATION RESERVE PROGRAM

In 1961 the Conservation Reserve Program was the only active program of the Soil Bank in operation. The Soil Bank was enacted by Congress in May of 1956. During the years 1956 through 1958 a second program, "The Acreage Reserve" was operative. Congress did not extend the Conservation Reserve Program after 1960 other than to fulfill the obligations for contracts that were signed during the 1956-1960 programs. The Conservation Reserve Program is a long range program which provides for the withdrawal of cropland from production and the establishing of approved conservation measures on the land withdrawn.

It was a voluntary program under which producers signed contracts for periods of from three to ten years. The contracts are for a minimum of three years where sufficient cover is already established, and from five to ten years when approved conservation practices are to be carried out. In return, the Government assists producers (1) by sharing the cost of establishing conservation practices, and (2) by making annual payments during the period each contract is in effect.

As of December 31, 1961, there were 14,794 contracts in effect, covering 1,055,866 acres. The annual payments under the contracts still in effect in 1961 amounted to \$12,068,433 for that year.

The program participation was among the leading in the nation. For example, the number of contracts was the fourth highest. In other participation comparisons, Georgia's rank was among the top ten states. The contracted acreage for tree cover was number one nationally, Georgia's acreage accounting for a third of the total.

This program is administered by the local ASC County Committees. Their responsibility is to determine and approve eligible land, annual payment and cost-share rates for all producers who desire to participate and enforce the terms and conditions prescribed in the contracts. Both county and community committeemen are to be commended for the fine job they have done in the administration of the Conservation Reserve Program.

Tables showing statistics by counties are recorded in Part II.

FEED GRAIN ACREAGE - CONSERVATION USE

A typical field diverted from corn production and devoted to a conservation use on a farm in Georgia under the 1961 Feed Grain Program.

FEED GRAIN PROGRAM

On March 22, 1961 Congress enacted emergency legislation authorizing the 1961 Feed Grain Program.

The objectives of this program were to (a) increase farm income, (b) prevent further buildup of the feed grain surplus, (c) to help assure the consumer of fair and stable prices of meat, poultry and dairy products, and (d) to reduce ultimate feed grain program costs to taxpayers.

This program offered all producers of corn and grain sorghum an opportunity to work together and in cooperation with their Government in the task of improving the feed grain situation. The program provided for the voluntary reduction of corn and grain sorghum acreage from the 1959-1960 base for these crops on individual farms. Diversion payments were made to growers for reducing their acreage of these crops a minimum of 20 percent below the base acreage established for the farm and devoting the diverted acreage to an approved conservation use.

Payments on the minimum diversion and on the diversion in excess of 40 percent of the base were made on 50 percent of the farms normal production times the support rate for the crop diverted. For additional diversion (up to 40 percent of the base) the payment was at 60 percent of the normal yield times the support rate.

For most farms, the payment was higher than the probable net income would have been had the acreage been planted. The payments assured the farmers of a reasonable net income from the cropland taken out of production, regardless of drought, hail, excessive rains, or other crop damage.

In addition to the payments for diverting the acreage from production of corn and grain sorghum, producers who participated in this program were also eligible for price support on corn and grain sorghum produced on the farm. Non-cooperators were not eligible for price support on these commodities.

A record of participation in this program by counties in the State is shown in the tables section of this report.

NAVAL STORES CONSERVATION PRACTICES

Area Forester,
Edward O. Powers

Mrs. Frances N. McRae,
McRae, Georgia, who
finds it profitable
to manage timber for
naval stores along
with her banking
business.

THE NAVAL STORES CONSERVATION PROGRAM

The gum naval-stores industry, the oldest woods' business in the south, enjoyed a healthy revival in 1961. The total ASCS cost-shares paid producers was the highest in 22 years.

The year marked the 25th anniversary of the Naval Stores Conservation Program, which was established in 1936. The Program is administered by the U. S. Forest Service in cooperation with ASCS.

Although gum naval stores is produced in the seven South Atlantic and Gulf Coast states, ranging from South Carolina to Texas, Georgia assumes the dominant position to an impressive degree. Here 4,500 producers in 1961 worked 30,508,135 longleaf and slash pine "faces" for gum, which represented 80 percent of the national effort. At a conservative average profit of 15 cents per "face", the business represented a woods' return to Georgians of \$4,576,220 for the year.

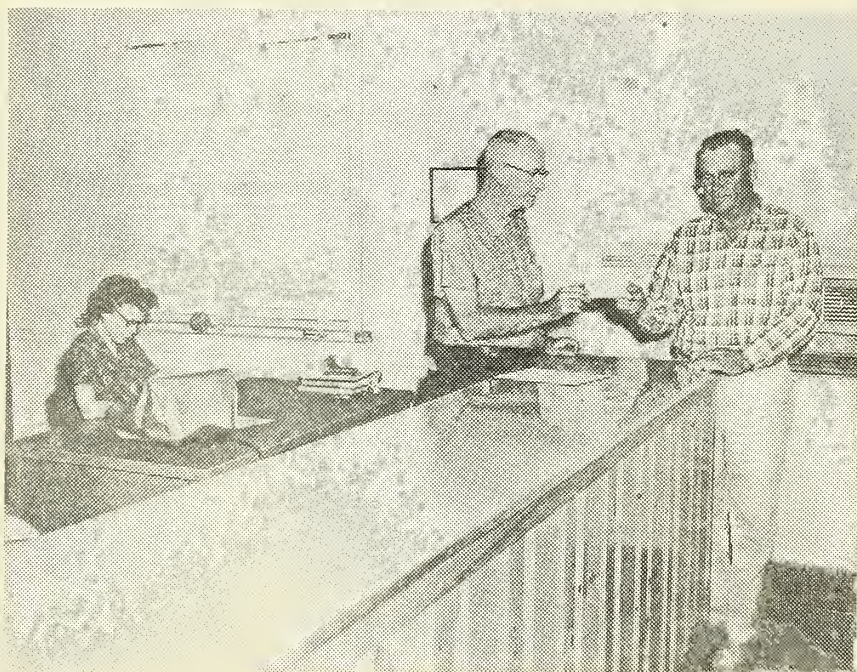

The objective of the Naval Stores Conservation Program is of course to get better work in the woods. Of the above 4,500 producers in Georgia, 2,704 or 60 percent operated under the Program and controlled the work on 83 percent of the "faces". For their conservation action these participants received \$719,490 in cost-shares for the year.

Seven Area Foresters, under the direction of Norman R. Hawley, Program Supervisor at Valdosta, are located in Georgia, as follows: Charles T. Shea, Waycross; Henry G. Backus, Jesup; Frank E. Fulmer, Claxton; Marion W. Ruffin, Vidalia; Arthur G. Steedley, McRae; Edward O. Powers, Tifton; and Jim A. McArthur, Valdosta. These men administer the Program.

PRICE SUPPORT LOANS FOR FARM STORED GRAIN

Oats under price support loan, stored on the farm. Farmers in Georgia obtained loans on more than 700,000 bushels of 1961-crop oats.

A producer receiving a draft for the proceeds of a loan for farm stored grain.

PRICE SUPPORT PROGRAMS

FARM STORAGE FACILITY AND MOBILE DRYING EQUIPMENT LOAN PROGRAMS

Price Support Programs.

Price support operations are carried out by the Commodity Credit Corporation, an agency of the U. S. Department of Agriculture. Such operations have been in effect since 1933. Over most of this period, the level of support has been either directed or authorized by specific price legislation. The Corporation has no operating personnel, its programs are carried out primarily through the personnel and facilities of the Agricultural Stabilization and Conservation Service of the Department.

Present price support operations are administered through the State and County Agricultural Stabilization Committees.

The purpose of price support programs is to stabilize farm income and prices, bring about a better balance between agricultural production and consumption, and assist farmers in the orderly marketing of their crops. Prices are supported through loans, purchase agreements, direct purchases and payments.

Prices on most storable commodities are supported by nonrecourse loans to eligible producers. Loans are made on eligible commodities stored in approved farm storage structures or in public warehouses approved under Uniform Grain Storage Agreements. Loans may be obtained through the ASC county committee of the county where the farm records are maintained. Commodities placed under loan may be redeemed by repaying the principal amount of the loan plus interest at $3\frac{1}{2}$ percent. The borrower has the option of redeeming the commodity at any time prior to the maturity date of the note.

Loans are the most popular method of price support, although there were a few purchase agreements executed in the State in 1961. Purchase agreements are available during the same period loans are available. Under a purchase agreement an eligible producer enters into an agreement with Commodity Credit Corporation in which CCC agrees to buy from him at the support rate, on the same date loans mature, at the farmer's option, a quantity of the commodity not in excess of the commodity specified in the purchase agreement. The producer is under no obligation to deliver any specified quantity.

Wool is supported by means of payments to producers. This payment is the percentage required to bring the national average price received by all producers for sales during the marketing year up to the announced incentive level (62 cents per pound). Payments for unshorn lambs are at a fixed rate per hundredweight of live lambs sold and are based on the shorn wool payment rate.

Peanuts are supported by farm storage loans and loans through grower cooperative associations under contract with Commodity Credit Corporation.

Tobacco is supported by purchases from eligible producers at support levels by the Tobacco Cooperative Stabilization Corporation.

In 1961, there was price support program activity in Georgia on cotton, corn, wheat, oats, barley, rye, soybeans, peanuts, tobacco, tung oil, honey and wool. The support rates on these commodities for 1961 were as follows: Cotton - from 33.67 cents to 33.97 cents per pound, basis middling 1-inch; cottonseed - \$45.00 per ton; corn - \$1.27 per bushel; wheat - \$1.95 per bushel; oats - 73 cents per bushel; barley - \$1.03 per bushel; rye - \$1.21 per bushel; soybeans - \$2.26 per bushel; peanuts - Runners, \$207.84 per ton; Southeastern Spanish, \$224.12 per ton; Virginia type, \$233.69 per ton; tobacco - 55.5 cents per pound average for flue-cured, and Burley 57.9 cents average; tung oil - 24 cents per pound; honey - white or lighter, 12.9 cents per pound, extra light amber 11.9 cents, light amber, 10.4 cents, other table and non-table honey, 8.4 cents per pound.

Price support activity for 1961 in Georgia by counties will be found in the tables included in this report.

Farm Storage Facility and Mobile Drying Equipment Loan Programs.

The farm storage facility and mobile drying equipment loan programs were established in 1949. These are not price support programs but are closely allied to price support programs. Funds are available through Commodity Credit Corporation to make loans to producers for the construction or purchase of new farm storage facilities or drying equipment needed on the farm for the storage and conditioning of eligible commodities produced on the farm.

Farmers may borrow up to 95 percent of the actual out-of-pocket cost of new farm storage structures. These loans are repayable in four equal annual installments, the first annual installment becoming due 12 months from the date the loan was disbursed. The interest rate on these loans is four percent per annum.

Loans up to 85 percent of the cost may be obtained by eligible producers for the purchase of mobile drying equipment. These loans are repayable in three equal annual installments and also carry an interest rate of four percent.

Applications for these loans are filed with the ASC County Committees of the county in which the farm records are maintained.

PRODUCTION ADJUSTMENT PROGRAMS

The Agricultural Program Laws provide for Acreage Allotments and Marketing Quotas on Cotton, Peanuts, Tobacco and Wheat (in "commercial" wheat states). In the declaration of policy as set forth in the Act requiring Marketing Quotas and Acreage Allotments, it is declared that it would be the policy to continue this Act for the purpose of conserving natural resources, preventing the wasteful use of soil fertility and of preserving, maintaining, and rebuilding farm land resources. To accomplish these purposes, the Act provides for assistance in the marketing of agricultural commodities for domestic consumption, and for export, and to regulate interstate and foreign commerce in cotton, wheat, tobacco, peanuts, and rice to the extent necessary to provide an orderly, adequate, and balanced flow of such commodities in interstate and foreign commerce through storage of reserve supplies, loans, and marketing quotas.

In Georgia, Acreage Allotment and Marketing Quota Programs were effective in 1961 on Cotton (Upland and Extra Long Staple), Peanuts, Tobacco (Burley and Flue-Cured) and Wheat.

There are outlined below, by commodities, some of the requirements of law requiring acreage allotments and marketing quotas.

Cotton

Excessive supplies of cotton directly and materially affect the volume of cotton moving in interstate and foreign commerce and cause disparity in prices of cotton and industrial products moving in interstate and foreign commerce with a consequent decrease in the volume of such commerce in industrial products.

The conditions affecting the production and marketing of cotton are such that without Federal assistance, farmers cannot effectively prevent the recurrence of excessive supplies and fluctuations in supplies, prevent indiscriminate dumping of excessive supplies on the nationwide and foreign markets, cannot maintain normal carry-overs of cotton and provide for the orderly marketing of cotton in interstate and foreign commerce.

In order to protect interstate and foreign commerce from the burdens caused by the marketing of excessive supplies of cotton, it is necessary that a supply be maintained, adequate to meet domestic consumption and export requirements in years of drought, flood and other adverse conditions, as well as in years of plenty, and that the soil resources of the nation be not wasted in the production of excess supplies of cotton.

In order to afford a cooperative plan to cotton producers to prevent burdens on interstate and foreign commerce caused by the marketing of excessive supplies and to promote, foster and maintain an orderly flow of an adequate supply of cotton in commerce, it was necessary to provide a national marketing quota and acreage allotment which are allocated to States, from them to counties and from counties to individual farms.

The Secretary found it necessary, based on the total supply of cotton, to declare a marketing quota for 1961. This quota was based on the need for 15,562,000 bales and it was determined that 18,398,424 acres would need to be planted to produce this amount of cotton. A national Marketing Quota Referendum was announced for December 13, 1960, whereby farmers engaged in the production of cotton that year would vote by secret ballot to determine whether they were in favor of quotas for 1961. It is necessary for at least two-thirds of those voting to vote in favor of quotas in order for them to be in effect. In the 1961 referendum, there were 193,456 producers voting nationwide. Of these, 96.6 percent voted in favor of quotas. In Georgia, 18,453 producers voted; 96.8 percent voting in favor of quotas.

With marketing quotas in effect, all cotton produced on farms, the allotments for which were not overplanted, was eligible for price support at 82 percent of parity. Cotton produced on overplanted farms in excess of the normal production was subject to a penalty of 19.5 cents per pound.

The national allotment is apportioned to States on the basis of the average acreage planted or regarded as planted to cotton during the preceding five years, adjusted for abnormal weather. The State allotment is apportioned to counties on the same basis with adjustments for individual years for abnormal weather conditions. The county allotment, less a reserve, was apportioned to the individual farms having an acreage history for 1959 or 1960 other than zero.

The ASC State Committee, as authorized, reserved an acreage for making adjustments to correct inequities and to prevent hardships. The county committees, as authorized, reserved an acreage for use in establishing new farm allotments and adjusting allotments for old farms.

Pertinent information on 1961 cotton is reported in Part II.

Peanuts

Peanut allotments and marketing quotas have been in effect continuously since 1949. Allotments are proclaimed by the Secretary of Agriculture, but marketing quotas are in effect only if two-thirds of the farmers, participating in a referendum, vote in favor of marketing quotas. Marketing Quotas were effective for 1961 as a result of a referendum held on December 15, 1959 for the years 1960, 1961, and 1962. Peanut allotments were established in 1961 in 84 counties in Georgia. All but one of these counties are located south of the counties of Troup, Meriwether, Pike, Lamar, Monroe, Jones, Putnam, Greene, Taliaferro, Wilkes and Columbia.

The final 1961 State allotment for all farms was 528,480.8 acres, which was 32.8 percent of the National allotment of 1,610,000 acres. This included 396.9 acres for new farms. This allotment is considerably larger than the allotment of any other State. After reserving a small acreage for correction of errors and establishing late allotments and a small acreage for making adjustments in old farm allotments, there were 528,007.9 acres allotted directly to the eligible farms in Georgia by the ASC State Committee.

In most instances, the majority of the farm allotments are planted but in cases where the farm operator desires, he may temporarily or permanently release all or any part of the farm allotment to the ASC county committee for reapportionment to other farms in the county.

Although the allotment for a farm may have been released, the allotment for such farm for the succeeding year would not be affected unless (1) such release was permanent, (2) the entire allotment was released temporarily in each of the past three years, or (3) the entire allotment was released temporarily in one or more of the past three years and no peanuts were picked or threshed in the remaining years or considered as devoted to peanuts under the Soil Bank Act or the preservation of history acreage provisions of Section 377 of the Act. Any acreage reapportioned to a farm will be deducted before establishing the allotment in the succeeding year. Any new farm allotment established for a farm will be reduced to the planted acreage if such acreage is less than the allotment.

The total production of peanuts in 1961 was 554,533,718 pounds for an average yield per acre of 1,205 pounds on 460,202.1 acres picked or threshed.

The actual number of pounds marketed, plus the peanuts retained on the farm for seed or other use, is recorded as the production. Peanut buyers record purchases on the marketing card issued for the farm and each farmer reports the number of pounds retained on the farm.

Part II of this report reflects data for each county with respect to allotted and harvested acreage, production, yield per acre, and the released and reapportioned acreage for 1961.

Tobacco

Final returns from the flue-cured tobacco marketing quota referendum held December 15, 1958, show that 90.6 percent of the growers voting in Georgia approved quotas for the 1959, 1960, and 1961 flue-cured tobacco crops. Final returns from the Burley tobacco marketing quota referendum held February 24, 1959, show that 98.1 percent of the growers voting in Georgia approved quotas for the 1959, 1960 and 1961 crops. (See Part II)

Flue-cured tobacco producers in 67 counties of Georgia were allotted 72,582.80 acres in 1961 and harvested 70,083.81 acres which produced 136,127,721 pounds for an average yield of 1,942 pounds per acre. (See Part II) A great majority of this tobacco was sold by producers at auction through the twenty-three (23) auction markets in Georgia. Some was sold to tobacco dealers at the farm and some was carried to other States for sale.

The gross sales in 1961 at the twenty-three (23) flue-cured auction markets in Georgia were 166,186,286 pounds for approximately \$97,451,638.00 for an average of \$58.64 per hundred. A majority of this tobacco was produced in Georgia; however, some tobacco produced in Florida, Alabama, North Carolina, South Carolina, and Virginia was brought to Georgia and sold and is included along with resale tobacco in the gross sales shown above. (See Part II)

Burley tobacco producers in fifteen (15) counties of Georgia were allotted 93.80 acres in 1961 and harvested 64.28 acres which produced 98,956 pounds, for an average yield of 1,539 pounds per acre. Since there are no auction markets for Burley tobacco in Georgia, this tobacco was sold to tobacco dealers at the farm or carried to other States for sale. (See Part II)

Wheat

Abnormally excessive supplies of wheat overtax the facilities of interstate and foreign transportation, congest terminal markets and milling centers, depress the price and otherwise disrupt the orderly marketing of such commodity in such commerce.

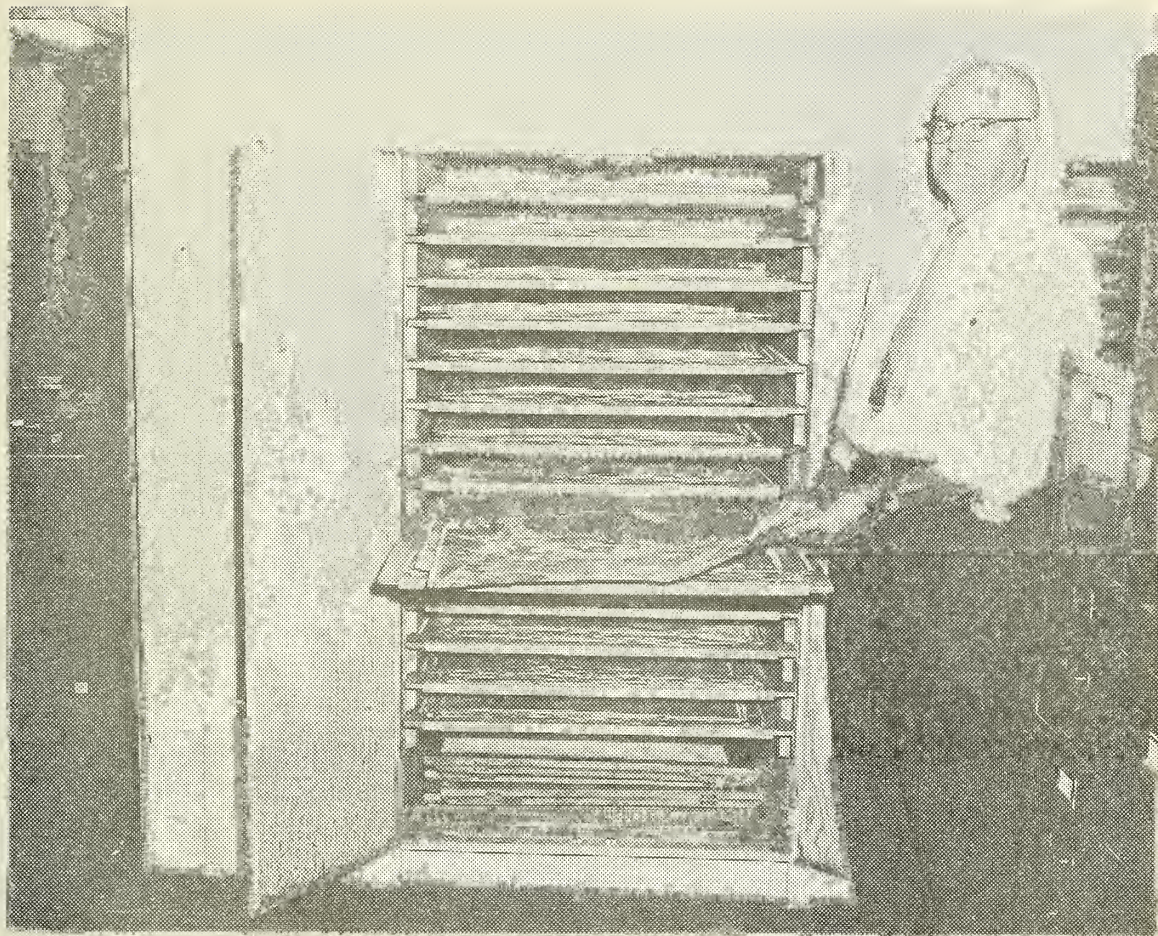

It is in the interest of the general welfare that interstate and foreign commerce in wheat and its products be protected from burdensome surpluses and distressing shortages and that a supply of wheat be maintained which is adequate to meet domestic consumption and exports in years of drought, flood, and other adverse conditions as well as in years of plenty. Excess surpluses result in disastrously low prices of wheat, destroy the purchasing power of producers and reduce the value of the agricultural assets supporting the natural credit structure.

The conditions affecting the production and marketing of wheat are such that, without Federal assistance, farmers cannot effectively prevent the recurrence of surpluses and shortages or provide for the orderly marketing of wheat in interstate and foreign commerce. To accomplish this, a National Acreage Allotment and Marketing Quota was provided by Congress. A national acreage allotment of 55 million acres was determined by the Secretary of Agriculture for the 1961 crop. This is the minimum acreage which can be established under present legislation. This acreage was apportioned to commercial wheat states on the basis of acreage seeded for production of wheat during the 10 years 1950-59, with adjustments for abnormal weather and for trends in planting. County allotments were determined on essentially the same basis as the State allotments. County allotments were apportioned among individual farms according to past acreage of wheat, tillable acres, crop rotation practices, type of soil and topography. Georgia's share of the national allotment was 111,395 acres.

A referendum was held on July 21, 1960, in which growers who would have more than 15 acres of wheat for harvest as grain in 1959 were eligible to vote. At least two-thirds of those voting in the referendum must vote in favor of quotas in order for them to be in effect. Voters in the 142 wheat counties in Georgia voted 98.0 percent in favor of quotas. Nationwide, 87.4 percent of those voting in the referendum voted in favor of marketing quotas. Producers without allotments were permitted to plant and harvest 15 acres without penalty. Wheat produced on an acreage in excess of the larger of 15 acres or the allotment was subject to a marketing quota penalty of \$1.08 per bushel.

Pertinent information on 1961 wheat is recorded in Part II of this report.

PERFORMANCE

A county office manager displaying a complete set of aerial photographs. Such photographs are used extensively throughout the State in making acreage determinations and for identifying land uses. Single photographs or complete county coverage of these photographs can be purchased by any interested person.

PERFORMANCE

Measurements being made for plotting an area on an aerial photograph. The acreage of the area plotted can be determined by planimetering.

PERFORMANCE

One of the most important jobs in administering ASCS programs consists of work in connection with the determination of acreages and in checking compliance with program provisions as set up in regulations issued by the Secretary of Agriculture. The ASC State Committee has the responsibility for making the necessary determinations as to policy and procedural methods to be used in carrying out the performance work in the State. The ASC county committees make necessary determinations as to policy and procedural methods to be used, to the extent latitude is provided for the county committee. The county committees employ performance reporters to perform the following jobs:

1. Measure the acreage of all crops subject to acreage allotments and marketing quotas.
2. Measure the planted and diverted acreages under the Feed Grain Program.
3. Inspect and measure the acreage designated under the Conservation Reserve Program.
4. Measure the acreage of Soil Bank Base Crops.
5. Determine compliance with requirements for practices performed under the Agricultural Conservation Program.
6. Determine compliance with requirements for practices performed under the Conservation Reserve Program.
7. Make farm visits at the expense of farmers to remeasure acreages and to witness disposition of excess acreages.
8. Make farm visits at the expense of farmers to premeasure acreages to be planted to crops and devoted to uses in accordance with the applicable programs.

A sufficient number of reporters are employed by each county office to insure that the job is completed timely. The reporters are thoroughly trained in performance work by State and county performance supervisors and assistant State compliance specialists to insure that accurate determinations are made in the field. The work of each reporter is spot-checked periodically by both county performance supervisors and State office representatives to further insure that accurate work is done. In 1961, there were 1171 performance reporters employed on a temporary basis to make the required acreage and performance determinations in the State. Three assistant State compliance specialists and ten State compliance supervisors were employed to assist county offices in training reporters and in spot-checking their work. See Part II for acreage determinations required by commodities and programs.

USE OF AERIAL PHOTOGRAPHY

Most all of the acreage determinations are made by using aerial photographs which are enlarged from an aerial negative to a desired scale. Aerial photographs are also used to identify areas in connection with the ASCS programs. A complete set of aerial photographs is maintained by each county office in the State.

In order to insure the accuracy of all aerial photographs to be used in performance work, they are checked by trained personnel by comparing the distance measured on the photograph and on the ground. Three State office compliance specialists are employed to check the scaling of new photographs and do ground control work to insure that the scaling is correct.

The counties in the State are divided into six areas and a new flight is made to cover one area each year. This provides a new set of photography for most counties every six years. During 1961 aerial photography was obtained and prepared for 23 counties in the State. An additional 24 counties were placed under contract to be flown and new photography will be prepared and completed for use in 1962. Experience has proven that aerial photography is the most economical and accurate method of measuring acreages.

HOW ACREAGES ARE MEASURED.

Performance reporters carry the aerial photographs to the farms where acreages are to be determined and first locate the fields to be measured. After a visual inspection of a field to be measured, the exact field is plotted in its proper location on the photograph. In some instances, reporters measure from objects outside the planted area in order to establish on the photograph the exact point where the crop to be measured begins and ends. Where fields are too small to be plotted on the photograph, they are ground measured and computed. The acreage in each field plotted on the photograph is determined from the photograph by the use of a "planimeter", which is a precision built instrument for determining acreage on a plane surface.

PREMEASUREMENT SERVICE.

The State Committee offered as a service to farmers official premeasurement of acreage prior to planting of allotment crops, feed grain crops, and soil bank base crops. The farmers making a request for official premeasurement were required to pay the cost of this service. There were 8863 requests made for premeasurement service in 1961. See Part II for premeasurement by programs.

AGRICULTURAL CONSERVATION PROGRAM.

The county committees are responsible for determining compliance with ACP practices for which ACP cost-shares are approved. Spot-checks are made by representatives of both county committees and the State Committee to determine that farmers carry out ACP practices according to specifications and that materials and services furnished with Government purchase orders are received and properly used. Vendors records are also spot-checked to see

that all materials and services are delivered in accordance with regulations governing the use of purchase orders. A minimum of five percent of the farms on which practices are reported by farmers are spot-checked. See Part II for spot-checks made on ACP practices.

SOIL BANK PROGRAM.

In addition to inspecting and measuring acreage designated under the Soil Bank Program and measuring the acreage of crops classified as soil bank base crops, other checks are made to determine compliance with program provisions. The county committees are responsible for determining compliance with Conservation Reserve contracts and Conservation Reserve Program practices for which CRP cost-shares are approved. Spot-checks are made by both the county committees and the State Committee to determine that farmers carry out CRP practices according to specifications and that adequate cover is established and maintained on Conservation Reserve areas. Spot-checks are also made to determine compliance with respect to the prohibition against grazing the designated Conservation Reserve acreage. See Part II for spot-checks made on Soil Bank Program.

PERFORMANCE ACREAGE DETERMINATIONS - 1961

Crop or Program	: Initial :Determinations: : Required	: : Remeasurements: :	: : Adjustments: :	: : Total
Cotton - Upland	66,638	1,090	4,313	72,041

ORGANIZATION OF THE
AGRICULTURAL STABILIZATION AND CONSERVATION SERVICE
GEORGIA STATE OFFICE

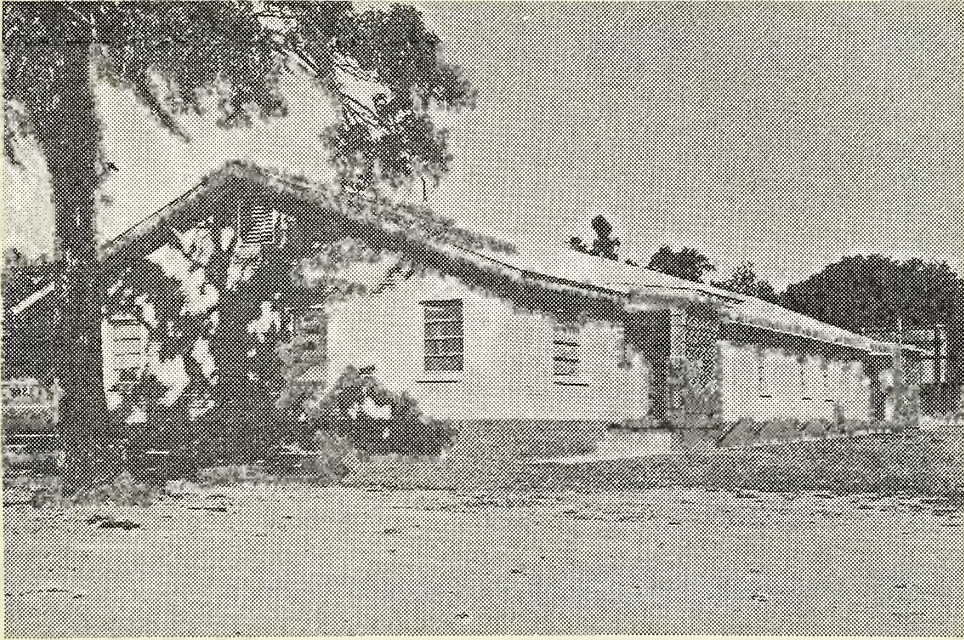

The pictures above were taken in the counter and reception room of one of the new modern ASCS offices in Georgia. These farmers are signing requests for participation in the Agricultural Conservation Program.

Pictured above are two newly constructed modern ASCS offices. These offices were constructed through local co-operative efforts of county commissioners and the local ASC committee. They are arranged to permit maximum efficiency in operations and are very comfortable, well lighted and heated and cooled with central units.

Pictured above is an agricultural building recently constructed through the local efforts of county and State government officials and officials of the agricultural agencies. This building houses all of the agricultural agencies in the county. Its internal arrangement incorporates the latest in modern office equipment with the areas arranged for maximum efficiency.
